

NRCAN PPP Script:

Some helpful hints on running the NRCAN PPP Script

Author: Khal Feen (k.a@unb.ca)

Run cmd in directory holding the NRCAN script to view commands:

```
python csrs_ppp_cgi_browser.py -h
```

When running on Windows, you may need to install the following programs:

Wget

Download: <http://downloads.sourceforge.net/gnuwin32/wget-1.11.4-1-setup.exe>

or <http://gnuwin32.sourceforge.net/packages/wget.htm> for more options

add wget.exe to path: C:\Program Files (x86)\GnuWin32\bin

unzip

download: <http://stahlworks.com/dev/index.php?tool=zipunzip>

add to program files manually (ie. Create folder C:\Program Files (x86)\Unzip and put unzip.exe inside)

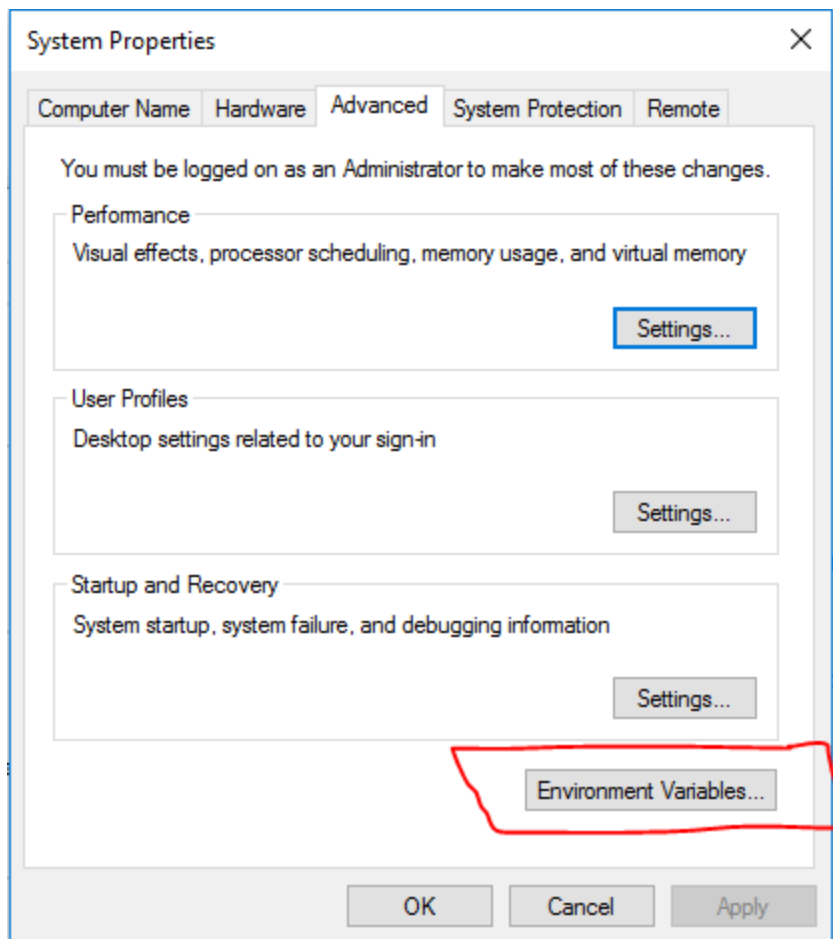

add to path

To add path in windows:

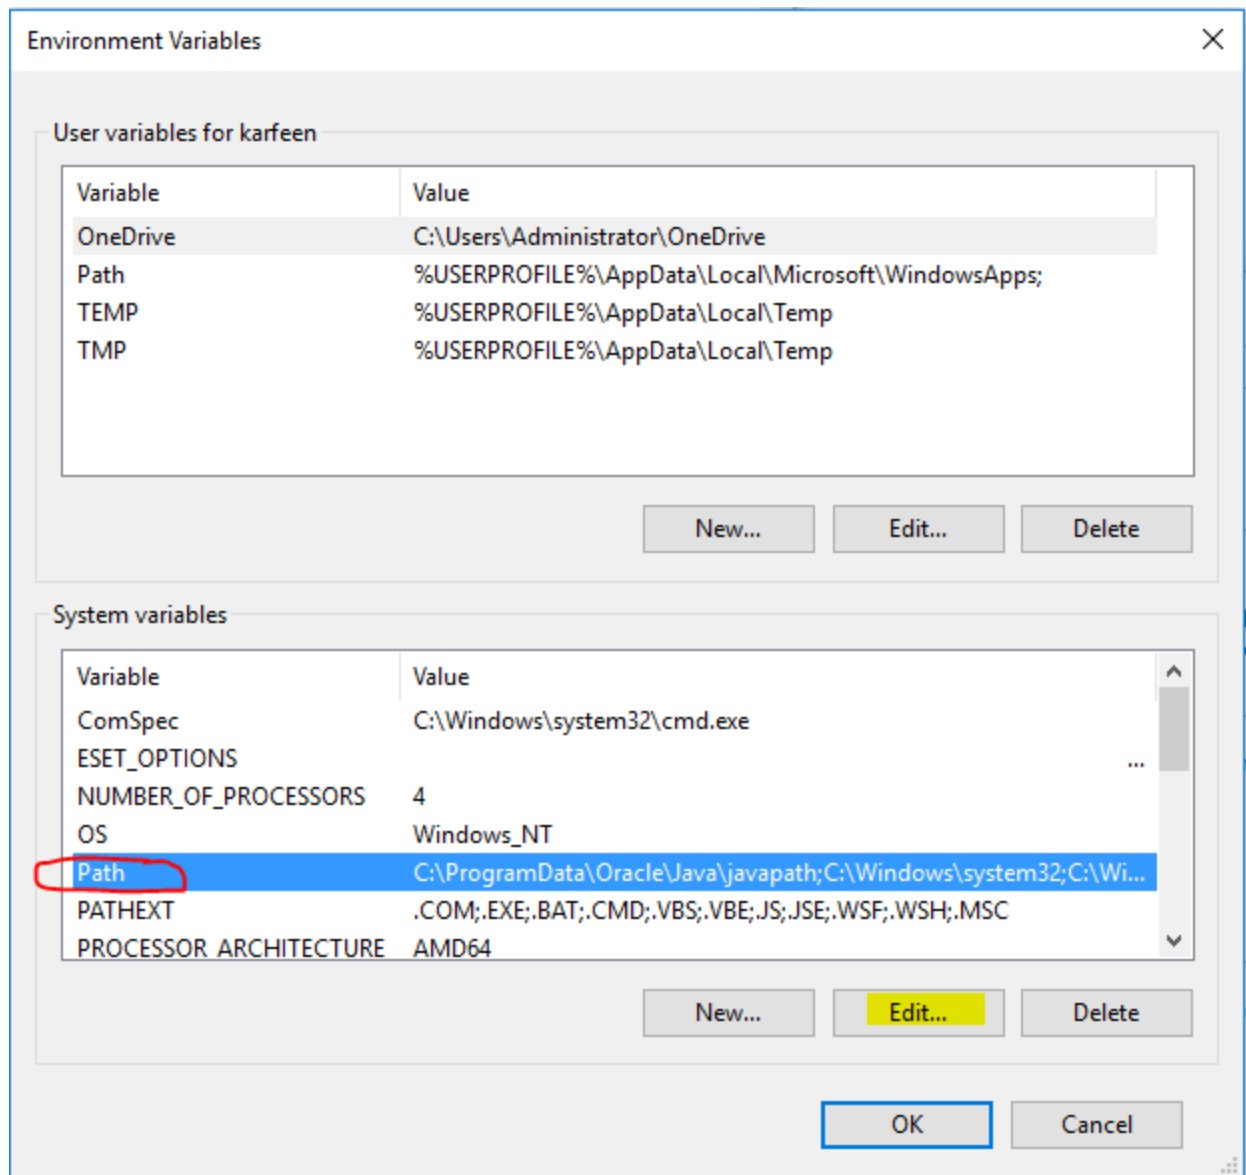

Press windows key + Pause/Break -> windows system window will open

Press “advanced system settings” on left -> system properties will open

Under Advanced press “Environment Variables...” on bottom right

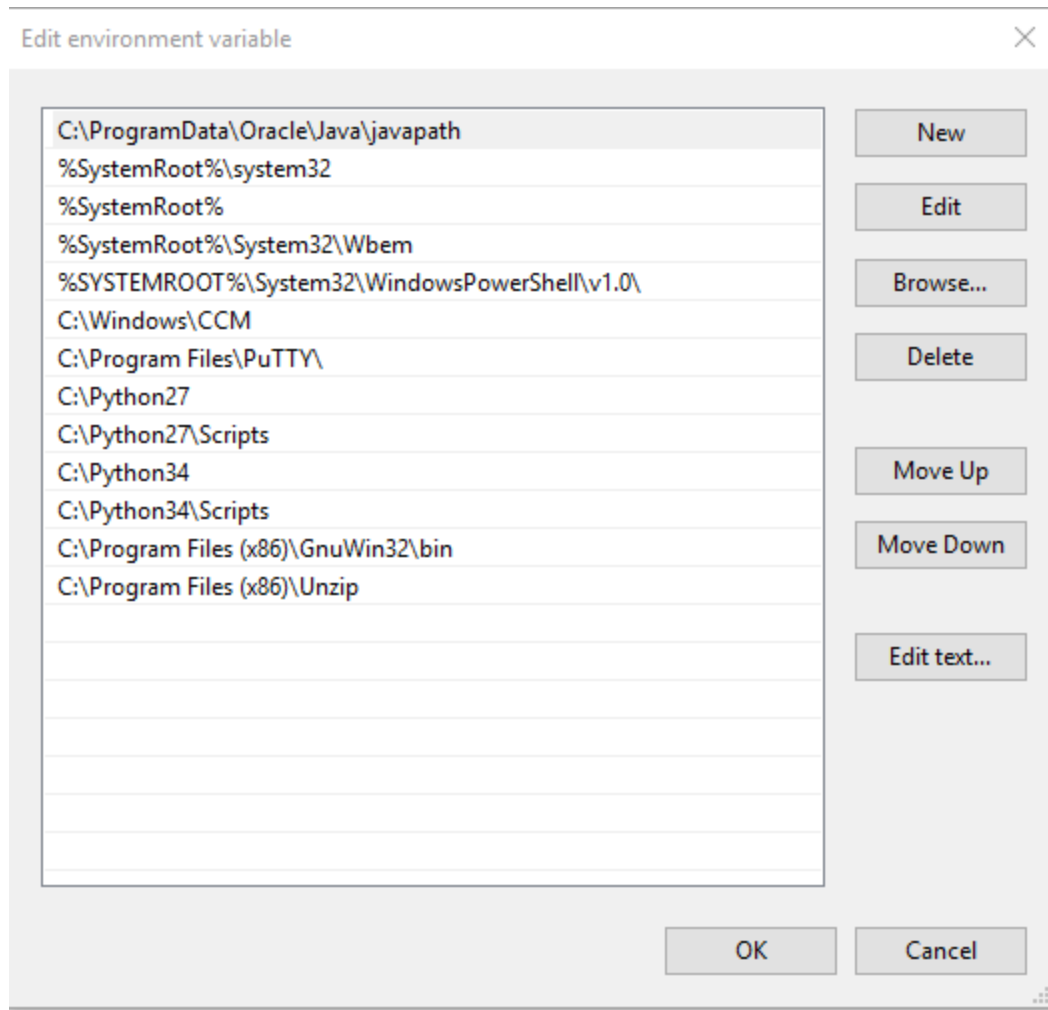

In the bottom box, select "Path" and click Edit

Add folders containing the .exe files you would like on path.

For example:

Other troubleshooting:

code fixes:

if timing out in wget, increase this variable:

wget_max = 30 (increase if needed)

if this line is giving an error, enable shell to view windows error

```
log = Popen(shlex.split(command), stdout=PIPE, shell=True) #add shell
```

note: cmd needs to be restarted in you installed unzip or wget in session.
